BEACON NIGHT

Light up the night

Introduction

- Beacon Night is a web-based platform
- Helps users find restaurants and lodges that are actually open
- Designed mainly for night-time, travel, and emergency use

<https://github.com/charanmarpu489-design/beacon-night/tree/main>

FOUR BYTES

G.Chaturya-AP25110071238
M.Suvarchala-AP25110071032
M.Kalicharan-AP25110071206
B.Yaswanth-AP25110010534

PROBLEM & MOTIVATION

- Difficulty in finding open restaurants and lodges at night
- Existing platforms lack real-time open/close status
- Users waste time visiting closed places
- Need for a reliable solution during odd hours

<https://github.com/charanmarpu489-design/beacon-night/tree/main>

Solution Overview

- Displays only currently open restaurants and lodges
- Uses location, current time, and live availability
- Budget-based filtering for family-friendly options
- Busy / not-busy indicators to avoid crowded places

<https://github.com/charanmarpu489-design/beacon-night/tree/main>

Technology & Architecture

- Frontend: HTML, CSS, JavaScript
- Backend: Database for availability and place details
- Location-based and time-based filtering logic
- Scalable and modular system architecture

<https://github.com/charanmarpu489-design/beacon-night/tree/main>

Implementation & Results

- **IMPLEMENTED AS A LIGHTWEIGHT WEB APPLICATION**
- **INTEGRATED LOCATION ACCESS AND REAL-TIME STATUS CHECKING**
- **REDUCED TIME SPENT SEARCHING FOR OPEN PLACES**
- **IMPROVED USER EXPERIENCE DURING NIGHT HOURS**

<https://github.com/charanmarpu489-design/beacon-night/tree/main>

CONCLUSION & FUTURE SCOPE

- Provides trusted, real-time information
- Saves time and reduces user frustration
- Future enhancements:
 - Live owner updates
 - Ratings and reviews
 - Booking integration
 - Mobile app
- Emergency-friendly 24/7 filters
